                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                microorganisms such as Leishmania and Mycobacterium tuberculosis. Fusic polypeptides are used for enhancing the expression of polynucleotides, as in vivo diagnostic agents and for raising antibodies in a non-human animal. The invention is used in gene therapy. The present sequence is MTB59F fusion protein. This fusion protein comprises Ra35 protein from Mycobacterium tuberculosis and TbH9 protein from Mycobacterium sp.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              tuberculosis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to fusion proteins containing at least two Mycobacterium species antigens, nucleotides encoding them and compositions comprising such fusion proteins. The present invention particularly relates to nucleic acids encoding fusion proteins that composition is related to nucleic acids encoding fusion proteins that compared two or more individual M. tuberculosis antigens which increase the serological sensitivity of sera from individuals infected with cuberculosis and methods for their use in diagnosis, prevention and treatment of tuberculosis infection. Sequences of the invention and cuseful for eliciting an immune response in a mammal, e.g., human, communised with BCG. They are useful in the diagnosis, treatment and prevention of Mycobacterium infection. The fusion proteins and the colynucleotides are useful as diagnostic tools in patients infected with Mycobacterium, in vitro and in vivo assays for detecting humoral custom to generate or elicit a protective immune response in a communogens to generate or elicit a protective immune response in a communal. Sequences of the invention are also used as vaccines. MTB32A custom proteins of the invention are useful as in vivo diagnostic agents continual skin test. The present sequence is Mycobacterium species of the invention are useful as in vivo diagnostic agents continuated the proteins of the invention are also used as vaccines.

                                                                                                                                                                                                                                                                                                           The invention relates to a purified polypeptide which induces an immune response of Mycobacterium tuberculosis. Polypeptides of the invention are useful for diagnosing, treating or preventing M. tuberculosis infection, particularly tuberculosis infection. In particular, the polypeptides are useful as a vaccine formulation with an adjuvant to afford long-term protection in animals against the development of tuberculosis. The protein coding sequence may be used to encode a protein product for use as an immunogen to induce and/or enhance an immune response to M. tuberculosis. This sequence represents an M. tuberculosis fusion protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Reed

                                                                                                                                                                                                                                                                                                                                                                             This sequence represents a recombinant Mycobacterium tuberculosis tri-antigen fusion protein, termed Mtb61f, composed of the antigens TbH9, DPV and MTI. The fusion protein is expressed in host cells using a vector carrying a polynucleotide (see AAZ20203) comprising the coding sequences for the 3 antigens. The invention provides fusion proteins (see AAY32059-71) containing at least 2 M. tuberculosis antigens. The new fusion proteins and polynucleotides encoding them are useful as vaccines for preventing tuberculosis (claimed), for diagnosis (via in vitro assays or intradermal skin tests for detection of anti-M. tuberculosis antibodies), monitoring of disease progression, and treatment of tuberculosis. They are more effective immunogens than mixtures of the individual protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New fusion proteins useful for diagnosis, prevention and treatment of tuberculosis -
